The Nucleus of Quality Air Monitoring Programs

GLOBAL AIR SAMPLING OVERVIEW F&J MODEL GAS-EDL-300WE-REMP

The Global Air Sampling (GAS) systems provide air monitoring specialists worldwide with the ultimate operator flexibility for customizing the hardware to meet their specific needs.

The GAS product line enables an operator to select the engineering units for measured and calculated parameters as well as mass or volumetric flow and periodic or continuous sampling mode. The operator can select the data storage frequency and the RS232 data output frequency that best suits his application.

The GAS system displays a multitude of onboard calculations, including maximums, minimums and averages for measured and calculated parameters. The % Availability of the unit is also determined for continuous operation mode along with power outage commencement time and duration.

Hardware features include a 4 line \times 24 character vacuum fluorescent display, dual RS232 ports which permits integration with other instruments and to enable in-bound and outbound communication.

The flow rate and volume accuracy of 3.0% Full Scale (F.S.) is among the best in the industry.

The F&J Global Air Sampling (GAS) systems raise the bar for air sampling instruments by providing air sampling specialists with the maximum operator flexibility, an increase in the amount of valuable information about the air sampling event, increased accuracy and the best combination of tools to comply with present and future regulatory requirements.

Model GAS-EDL-300WE-REMP is designed for operation in desert environments of high temperatures and frequent wind blown sand storms.
